

Ciena and Trafikverket (General Directorate of Traffic in Sweden) trust in Colabora

Trafikverket is developing its optical fiber network based on Ciena equipment, because of its power and reliability. The engineering to expand this network, in excess of 40 nodes in major Swedish cities, has been made by CI. We much appreciate the confidence shown by both entities for such a complex project, due to adverse weather conditions the network should withstand along an important part of the year
